

CONCENTRIC
GEOSCIENCE

ANNUAL LANDFILL MONITORING AND REPORTING

Completed for a regional landfill facility in Saskatchewan

Concentric Geoscience is currently retained by a waste management authority to undertake annual environmental monitoring and reporting for a regional waste management facility near Meadow Lake, SK. The facility's Permit to Operate a Waste Disposal Ground requires routine site monitoring of groundwater elevations, collection and analyses of groundwater samples from multiple piezometers, surface water sampling and leachate sampling. Concentric Geoscience personnel manage and undertake the environmental monitoring activities and synthesize all information and data into an annual environmental monitoring report that is prepared to comply with the facility's permit.
